

# How do I control the prompt order for attributes?

1072 GstarCAD Malaysia April 3, 2016 [Tips & Tricks](#) 0 4192

When building the block definition, the selection order is the key. If you simply window off the geometry there is a good possibility the prompt order will not be as desired.

When selecting objects for a block definition, first individually pick the attribute definitions individually in the order you want to be prompted, then select the rest of the geometry.
