

How to reference objects to file/URL ?

1227 GstarCAD Malaysia June 30, 2021 [Tips & Tricks](#) 0 3368

In GstarCAD is possible to link an object to another file. So if you needed to see the components specifications or 3D model of a certain component from a drawing, you can add hyperlinks to an object.

The hyperlinks can be pointed directly to a manufacturer website, to a word document that contains the installation procedure, or to excel file that contains product specifications as samples.
