		20 1221	Load Settings	Clear Se	ttings	

You can create as many layers as you want.

Each layer created must be a predefined command, which you can name its layer, select layer color, linetype and lineweight.

After you execute the predefined command, its layer will be generated automatically.

You can save, load and clear all layer settings from the AUTOLAYER dialog box.

You can enable or disable the AUTOLAYER option from the status bar.
