

3DDWFPREC system variable

1305 GstarCAD MY /KW July 7, 2021 [System Variables](#) 0 2632

Function Description:

The **Function Description:** system variable is used to control the publishing precision of 3D DWF of 3D DWFx.

Type : Integer

Saved in : Drawing

Initial value : 2

Range : 1 ~ 6

System Variable Value:

Value = Precision

1 = 1

2 = 0.5

3 = 0.2

4 = 0.1

5 = 0.01

6 = 0.001

Note: Users could create multiple pages of DWF or DWFx in large size when setting the **3DDWFPREC** system variable to be 5 or 6.

The higher value of 3DDWFPREC system variable, the finer precision.
