3DSELECTIONMODE system variable

1309 GstarCAD MY /KW July 7, 2021 <u>System Variables</u> 0 2407

Function Description:

The **3DSELECTIONMODE** system variable is used to control the selection priority of both visually and physically overlapped objects in 3D visual styles.

Type : Integer
Saved in : Registry
Initial value : 0
Range : 0,1

System Variable Value:

0 : apply the traditional 3D selection priority
1: apply line of sight 3D selection priority for selecting 3D solids and surfaces. In addition, this setting could also provide selection priority for a defined object which associated with surfaces.

Note: if selected objects are in 2d wireframe or 3d wireframe styles, the **3DSELECTIONMODE** system variable has no effect.
