ANNOAUTOSCALE system variable

1320 GstarCAD MY /KW July 8, 2021   0 2593

Function Description:

The **ANNOAUTOSCALE** system variable is used to update annotative objects to support annotation scales when they are changed.

If the **ANNOAUTOSCALE** system variable is a negative number, it closes auto scale function, but settings reserved.

Type : Integer
Saved in : Registry
Initial value : -4
Range : -4 ~ 4

System Variable Value:

0 : the new set annotation scales has not added to annotation objects.
1 : add new set annotation scales to annotative objects which support current scales except for those on layers that are turned off, frozen, locked or that are set to Viewport > Freeze.
2 : add new set annotation scales to annotative objects which support current scales except for those on layers that are turned off, frozen or that are set to Viewport > Freeze.
3 : add new set annotation scales to annotative objects which support current scales except for those on locked layers.
4 : add new set annotation scales to all annotative objects which support current scales.
