

DYNPROMPT system variable

1536 GstarCAD MY /KW July 14, 2021 [System Variables](#) 0 1016

Function Description:

The **DYNPROMPT** system variable is used to control the display of prompts in dynamic input.

Type : Integer

Saved in : Registry

Initial value : 1

Range : 0,1

System Variable Value:

0 :Off

1 : On

The **DYNMODE** system variable turns dynamic input on and off. If specified **DYNMODE** to be 0, it does not display prompts no matter how to set the **DYNPROMPT** system variable.
