

EXTMAX system variable

1549 GstarCAD MY /KW July 15, 2021 [System Variables](#) 0 761

Function Description:

The **EXTMAX** system variable is used to store the value of right-top corner point in the drawing extents.
(Read-Only)

Type : 3D point

Saved in : Drawing

Initial value : Unknown

If some new objects created outside of limits, users could use "**All**" or "**Extent**" option of **ZOOM** command to scale objects to new extents.

The **EXTMAX** system variable value is the world coordinate value in current space.
