

ISAVEPERCENT system variable

1648 GstarCAD MY /KW July 19, 2021 [System Variables](#) 0 912

Function Description:

The **ISAVEPERCENT** system variable is used to determine the amount of wasted space that allowed in a drawing file.

Type : Integer

Saved in : Registry

Initial value : 50

Range : 0 ~ 100

The value of **ISAVEPERCENT** system variable is an integer from 0 to 100. The default value 50 means the amount of wasted space taking 50 percentages of all space.

The wasted space could be removed when time expired. When the estimate exceeds 50 percent, the next save will be a full save. This resets the wasted space estimate to 0. If **ISAVEPERCENT** system variable is set to 0, every save is a full save
