

LAYLOCKFADECTL system variable

1659 GstarCAD MY /KW July 19, 2021 [System Variables](#) 0 1033

Function Description:

The **LAYLOCKFADECTL** system variable is used to control the amount of fading for objects on locked layers.

Type : Integer

Saved in : Registry

Initial value : 50

Range : -90 ~ 90

System Variable Value:

0 : locked layers are not faded

>0 : when the value is positive, control the percentage of fading up to 90%

<0 : when the value is negative, locked layers are not faded, but the value is saved for switching to that value by changing the sign

Note: the fading value is limited to 90 percent to avoid confusion with layers that turned off or frozen.
