

## LAYLOCKFADECTL system variable

1659 GstarCAD MY /KW July 19, 2021 [System Variables](#) 0 1019

### Function Description:

The **LAYLOCKFADECTL** system variable is used to control the amount of fading for objects on locked layers.

**Type** : Integer

**Saved in** : Registry

**Initial value** : 50

**Range** : -90 ~ 90

### System Variable Value:

- 0** : locked layers are not faded
- >0** : when the value is positive, control the percentage of fading up to 90%
- <0** : when the value is negative, locked layers are not faded, but the value is saved for switching to that value by changing the sign

Note: the fading value is limited to 90 percent to avoid confusion with layers that turned off or frozen.
