

LIGHTINGUNITS system variable

1664 GstarCAD MY /KW July 19, 2021 [System Variables](#) 0 723

Function Description:

The **LIGHTINGUNITS** system variable is used to specify whether to use generic light source or photometric lights to control light, and specify light units for drawing.

Type : Integer

Saved in : Drawing

Initial value : 2

Range : 0,1,2

When specified **LIGHTINGUNITS** to be 1 or 2, turn on photometric light; or turn on standard light.

System Variable Value:

0 : do not use light units and turn standard (generic) light on

1 : use the imperial light units and turn photometric light on

2 : use the metric light units and turn photometric light on
