# LOFTPARAM system variable

1679  GstarCAD MY /KW  July 21, 2021  [System Variables](#)   0  928

**Function Description:**

The **LOFTPARAM** system variable is used to control the shapes for loft solids and surfaces.

**Type** : Bitcode
**Saved in** : Drawing
**Initial value** : 7
**Range** : 0 ~ 15

**System Variable Value:**

**1** : no twist(minimize the twist between cross sections)
**2** : align direction(align the start and end directions for each section curves)
**4** : simplify(generate simple solids and surface, such as cylinder or planes, rather than spline solids or surfaces )
**8** : close(close the surface or solid between the first and last cross section)
