

ORTHOMODE system variable

1730 GstarCAD MY /KW July 22, 2021 [System Variables](#) 0 1084

Function Description:

The **ORTHOMODE** system variable is used to constrain cursor movement in perpendicular direction.

Type : Integer

Saved in : Drawing

Initial value : 0

Range : 0,1

When the **ORTHOMODE** is on, the cursor could move horizontally and perpendicularly relative to UCS and current grid rotation angle.

System Variable Value:

0 : turn ortho mode off

1 : turn ortho mode on
