

## **ORTHOMODE system variable**

1730 GstarCAD MY /KW July 22, 2021 [System Variables](#) 0 1070

### **Function Description:**

The **ORTHOMODE** system variable is used to constrain cursor movement in perpendicular direction.

**Type** : Integer

**Saved in** : Drawing

**Initial value** : 0

**Range** : 0,1

When the **ORTHOMODE** is on, the cursor could move horizontally and perpendicularly relative to UCS and current grid rotation angle.

### **System Variable Value:**

**0** : turn ortho mode off

**1** : turn ortho mode on
