

## SAVETIME system variable

1801 GstarCAD MY /KW July 26, 2021 [System Variables](#) 0 1013

### Function Description:

The **SAVETIME** system variable is used to set automatically saved time interval by minutes.

**Type** : Integer

**Saved in** : Registry

**Initial value** : 10

**Range** : 0 ~ 600

### System Variable Value:

**0** : close auto save

**>0** : specify a none zero integer as time interval to save drawings automatically Once modified a drawing, the SAVETIME starts to time.

After manually executed **QSAVE**, **SAVE** or **SAVEAS** commands, the timer will be reset and start to time. The store path for current drawing is determined by **SAVEFILEPATH** system variable. The file name is stored by **SAVEFILE** system variable.
