

SELECTIONAREAOPACITY system variable

1805 GstarCAD MY /KW July 26, 2021 [System Variables](#) 0 667

Function Description:

The **SELECTIONAREAOPACITY** system variable is used to control the opacity of selection area in window selection and crossing selection.

Type : Integer

Saved in : Registry

Initial value : 25

Range : 0 ~ 100

The smaller of the opacity value, the more transparent of selection area. If specified it to be 100, the selection area become completely opaque. To view the effect, the **SELECTIONAREA** system variable must be turned on.
