

TEXTED system variable

1868 GstarCAD MY /KW July 27, 2021 [System Variables](#) 0 956

Function Description:

The **TEXTED** system variable is used to specify the display of user interface when creating and editing single texts.

Type : Integer

Saved in : Registry

Initial value : 2

Range : 0,1,2

Those settings could be applied on single texts created by TEXT command.

System Variable Value:

0 : display in-place editor when creating or editing single texts

1 : accept texts in command line when creating single texts. Display in-place editor dialog box when editing sing texts.

2 : the same as 0, the difference is that it auto repeats text entering.
