

XDWGFADECTL system variable

1924 GstarCAD MY /KW July 28, 2021 [System Variables](#) 0 993

Function Description:

The **XDWGFADECTL** system variable is used to control the fade degree for all DWG xref objects.

Type : Integer

Saved in : Registry

Initial value : 50

Range : -90 ~ 90

System Variable Value:

0 : DWG xref objects do not fade

>0 : when this value is a positive value, the fade degree is controlled by percentage up to 90%

<0 : when this value is a negative value, DWG xref objects do not fade, but the value is kept and it could be converted by changing its symbol.
