XDWGFADECTL system variable

1924 GstarCAD MY /KW July 28, 2021 [System Variables](#) 0 1013

Function Description:

The **XDWGFADECTL** system variable is used to control the fade degree for all DWG xref objects.

Type : Integer
Saved in : Registry
Initial value : 50
Range : -90 ~ 90

System Variable Value:

0 : DWG xref objects do not fade
>0 : when this value is a positive value, the fade degree is controlled by percentage up to 90%
<0 : when this value is a negative value, DWG xref objects do not fade, but the value is kept and it could be converted by changing its symbol.
