XLOADCTL system variable

1927 GstarCAD MY /KW July 28, 2021 [System Variables](#)   0 1186

Function Description:

The **XLOADCTL** system variable is used to open or close the demand-loading function for xref, and also control whether to open the drawing or its copy.

Type : Integer
Saved in : Registry
Initial value : 2
Range : 0,1,2

System Variable Value:

0 : close demand-loading; load entire drawing
1 : open demand-loading. Open and lock xref drawing.
2 : open demand-loading. Open and lock copy of xref drawing; do not lock xref drawing.
  When specified it to be 2, copy of each xref drawing file will be stored in the file folder or temporary file folder specified by **XLOADPATH** system variable.
  For cross network operation, the speed of loading xref is fast; open a drawing attached several xrefs, this improved performance is obvious.
