

AREATABLE command

1964 GstarCAD MY /KW August 2, 2021 [CAD Commands](#) 0 850

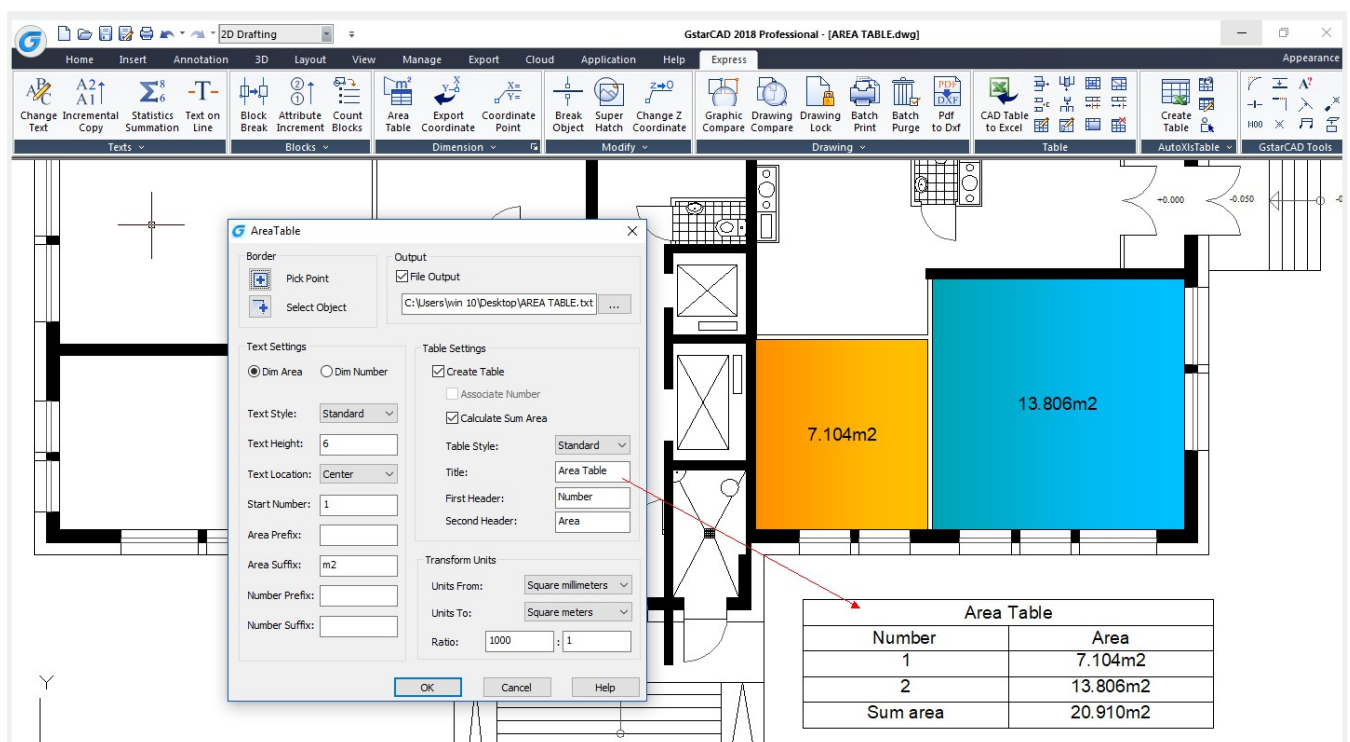

The **AREATABLE** command automatically dimension and count the area of an enclosed object and export the result to a table in the current drawing area.

Command name : AREATABLE

The enclosed area or object can be marked with a number or area symbol, and the area table data can be generated at the same time.

The area data can be exported to a text or table file.

The values in the table can be changed automatically when the number or area size is changed.
