

BASE command

1988 GstarCAD MY /KW August 3, 2021 [CAD Commands](#) 0 765

The **BASE** command is used to insert base point for the current drawing settings.

Command Access:

Ribbon : Home > Block > Set Base Point

Menu : Draw > Block > Base point

Command : BASE (or 'base for transparent use)

Command Prompts:

Enter base point <0.0000,0.0000,0.0000> :

Function Description:

The base point is expressed by the current UCS coordinate.

In order to insert the current drawing to another drawing or take the current drawing as the external reference of another drawing, the base point will be taken as the insertion point.
