

CUIIMPORT command

2061 GstarCAD MY /KW August 10, 2021 [CAD Commands](#) 0 1321

The **CUIIMPORT** command is used to import the customize settings from enterprise or local CUIx files to the main CUIx files.

Command Access:

Menu : Tools > Customize > Import Customizations...

Command : CUIIMPORT

Function Description:

Users could transfer customization information between the main CUIx files and the local CUIx files. Open the “Transfer” option in the Customize User Interface by default. Users could drag one item from one CUIx file to another CUIx file. Click the “Apply” button to save changes and view updated CUIx file.
