DIMOVERRIDE command

2088 GstarCAD MY /KW August 11, 2021 <u>CAD Commands</u> 0 1096

The **DIMOVERRIDE** command is used to control the override values of system variable in specified dimension.

Command Access:

Ribbon : Annotation > Dimension > DIMOVERRIDE
Menu : Dimension > Override
Command : DIMOVERRIDE

Command Prompts:

Enter dimension variable name to override or [Clear overrides]:

Function Description:

Users could override dimension system variable of selected dimension or clear override of selected dimension object, they could also return to the setting defined by its dimension style.

Relative Glossary:

Dimension Variable name to Override:
Override specified dimension system variable name.
Clear Overrides:
Clear specified overrides and return to the setting defined by its dimension style.
