

DIMROTATED command

2090 GstarCAD MY /KW August 11, 2021 [CAD Commands](#) 0 755

The **DIMROTATED** command is used to create a rotated linear dimension line.

Command Access:

Command: DIMROTATED

Command Prompts:

DIMLINEAR

Specify first extension line origin or <select object>:

Specify second extension line origin:

Specify dimension line location or [Mtext/Text/Angle/Horizontal/Vertical/Rotated]:

Relative Glossary:

First extension line origin:

After specifying the first extension line origin, it will prompt to specify the second extension line origin.

Dimension line location:

After specifying the dimension line location, the dimension will be created.

Mtext:

Edit dimension text by In-place text editor. Users could input special characters and symbols by control code or Unicode character string.

If the unit conversion is off, users could input square bracket ([]) to display them.

The current dimension style determines the appearance of generated measured value.

Text:

Customize dimension text under command prompt.

The generated measured value will be displayed in angle bracket (<>). If the unit conversion is off, users could input square bracket ([]) to display them.

User could reset the dimension style in "Text" option of New, Modify, and Override in Dimension Style Manager Dialog box.

Angle:

Modify angle of dimension text.
