

## **-GROUP command**

2141 GstarCAD MY /KW August 16, 2021 [CAD Commands](#) 0 1053

The **-GROUP** command is used to create and manage the saved object group.

### **Command Access:**

**Command :** -GROUP

### **Command Prompts:**

Enter group option [ ?/Order/Add/Remove/Explode/REName/Selectable/Create ] :

### **Relative Glossary:**

**?:**

List names and descriptions of groups defined in the drawing.

**Order:**

Change the numerical order of objects in the group.

**Reorder:**

Users could specify the position number of objects to recorder all members in the group.

**Reverse order:**

reverse the order of all members in the group.

**Add:**

Add objects to a group.

**Remove:**

Remove objects from a group. The group definition still exist even if all objects in group removed. They could be removed by Explode option.

**Explode:**

Explode the group into its component objects to delete a group definition.

**Rename:**

Assign a new name to an existing group.

**Selectable:**

Specify whether a group is selectable. When it is selectable, selecting one object in the group selects the whole group. Objects on locked or frozen layers are not selected.

**Create:**

Create a group. Group names could contain letters, numbers, and special characters such as dollar sign (\$), hyphen(-), and underscore(\_) but spaces. The name of a group is up to 31 characters long and they will be converted to uppercase characters.
