

# IMPORT command

2159 GstarCAD MY /KW April 11, 2022 [CAD Commands](#) 0 1176

The **IMPORT** command is used to import files of different formats to current drawing.

## Command Access:

Ribbon : Insert > Import > Import

Menu : File > Import...

Command : IMPORT

## Function Description:

Users could import data files (rather than DWG files) created by other applications to current drawing, data files will be converted to corresponding DWG files.

The following formats could be imported:

Metafile (\*.wmf): general metafile

ACIS (\*.sat): ACIS solid object files

3D Studio (\*.3ds): 3d studio files

If the FILEDIA system variable is specified to 0, it will display options in the command prompt line.
