

LAYMCUR command

2172 GstarCAD MY /KW April 15, 2022 [CAD Commands](#) 0 1458

The **LAYMCUR** command is used to change the current layer to be another layer of specified object.

Command Access:

Ribbon : Home > Layer > LAYCUR

Menu : Format > Layer Tools > Change to Current Layer

Command : LAYCUR

Command Prompts:

Select object whose layer will become current:

Function Description:

Users could change the current layer by selecting objects on current layer. This is a convenient way to specify layer name in layer properties manager.
