

## **LAYMCUR command.**

2183 GstarCAD MY /KW August 17, 2021 [CAD Commands](#) 0 1005

The **LAYMCUR** command is used to change the current layer to be another layer of specified object.

### **Command Access:**

**Ribbon** : Home > Layer > LAYMCUR

**Menu** : Format > Layer Tools > Change to Current Layer

**Command** : LAYMCUR

### **Command Prompts:**

Select object whose layer will become current:

### **Function Description:**

Users could change the current layer by selecting objects on current layer. This is a convenient way to specify layer name in layer properties manager.
