

# PASTECLIP command

2272 GstarCAD MY /KW August 19, 2021 [CAD Commands](#) 0 1468

The **PASTECLIP** command is used to paste objects from the clipboard to current drawing.

## Command Access:

**Ribbon** : Home > Clipboard > Paste > Paste

**Menu** : Edit > Paste

**Command** : PASTECLIP

**Shortcut** : right-click and select "Clipboard" option, click "Paste" when there is no command active

**Shortcut** : Ctrl+V

## Command Prompts:

Specify insertion point:

## Function Description:

If there are ASCII texts on the clipboard, they will be pasted as the default setting of MTEXT and inserted as MTEXT objects. The spreadsheet will be inserted as table objects. Except the GstarCAD objects, all other objects will be inserted as OLE. Users could edit them by double-clicking them and open their application programs.

It will save all available formats for objects when copied to the clipboard and it will save the format with most information for objects on the clipboard when pasted to drawings. Users could use COPY and PASTE commands to transfer objects in drawings.
