

PLOTSTYLE command

2284 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 1312

The **PLOTSTYLE** command is used to control the named plot style; the named plot style has been attached to current layout and could be assigned to objects.

Command Access:

Menu : File > Plot Style Manager...

Command : PLOTSTYLE

Function Description:

Before using PLOTSTYLE command, users should set the current drawing to be a Named plot style. If the drawing is a Color Dependent plot style, users could use CONVERTPSTYLES command to convert it to a Named plot style. The PSTYLEPOLICY system variable should be specified to 0 before setting the new drawing to be a Named plot style.
