

PREVIEW command

2291 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 1007

The **PREVIEW** command is used to preview drawings that need to be printed.

Command Access:

Ribbon : Export > Plot > Preview

Menu : Application menu > Print... > Print Preview

Menu : File > Plot Preview

Command : PREVIEW

Function Description:

The preview is based on current plot settings defined by "Page Setup Manager" or "Plot" settings. In preview, it will display the exact appearance of graph containing lineweight, fill pattern and other plot style options. The cross cursor will become a magnifier with a (+) to zoom in and a (-) to zoom out. Pressing the mouse and dragging the cross cursor to the top of screen will zoom in the graph preview; on the contrary, dragging it to the bottom of screen will zoom out it.

Plot

Plot the whole graph displayed in preview and then exit "plot preview".

Pan

Display translation cursor or hand shape cursor. It could be used to translate and preview graph. Pressing the mouse and dragging the cursor to any directions, graph could be moved with the cursor.

Zoom

Display zoom cursor or magnifier cursor. It could be used to zoom in or zoom out the preview graph. Pressing the mouse and dragging the cross cursor to the top of screen, the graph preview will be zoomed in; on the contrary, dragging it to the bottom of screen, it will be zoomed out.

Zoom window

Zoom and display the specified window. The "Zoom window" is used to zoom and translate cursor.

Full screen zoom

Restore the initial whole view. The "Full screen zoom" option could be used together with zooming and translating cursor.

Off

Turn off the "Preview" window
