

QSELECT command

2307 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 1064

The QSELECT command is used to create selection sets according to filter conditions.

Command Access:

Ribbon : Home > Utilities > QSELECT

Menu : Tools > Quick Select...

Command : QSELECT

Shortcut : right-click and click "Quick Select" in the drawing area when all commands inactive

Function Description:

Users could filter by the object type and property. For example, users could select all multiple text objects with specified text style in drawings.
