

# QSELECT command

2307 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 1066

The **QSELECT** command is used to create selection sets according to filter conditions.

## Command Access:

**Ribbon** : Home > Utilities > QSELECT

**Menu** : Tools > Quick Select...

**Command** : QSELECT

**Shortcut** : right-click and click "Quick Select" in the drawing area when all commands inactive

## Function Description:

Users could filter by the object type and property. For example, users could select all multiple text objects with specified text style in drawings.
