

## **RESUME command**

2331 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 1032

The **RESUME** command is used to continue executing the interrupted script file.

### **Command Access:**

Command : RESUME

### **Function Description:**

Users could stop a macro script file by pressing Esc or Backspace key. During the process of inputting of a script file, if there is something wrong, the script file will be suspended and users could use RESUME command to continue it.
