

RESUME command

2331 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 1036

The **RESUME** command is used to continue executing the interrupted script file.

Command Access:

Command : RESUME

Function Description:

Users could stop a macro script file by pressing Esc or Backspace key. During the process of inputting of a script file, if there is something wrong, the script file will be suspended and users could use RESUME command to continue it.
