

# SKETCH command

2354 GstarCAD MY /KW August 23, 2021 [CAD Commands](#) 0 1062

The **SKETCH** command is used to create a series of sketched segments.

## Command Access:

**Command** : SKETCH

## Command Prompts:

Record increment <1.0000>:

Sketch. Pen/eXit/Quit/Record/ Erase /Connect.

## Function Description:

Users could use this command to create irregular polygon boundaries. Before this, users should specify "Record increment" firstly.

## Relative Glossary:

Record increment:

Define length of each segment drawn by sketching. To create a line, the moving distance of pointing device must larger than increment value. Users could use the SKETCHINC system variable to specify the increment value.
