

TIFOUT command

2393 GstarCAD MY /KW August 24, 2021 [CAD Commands](#) 0 761

The TIFOUT command is used to save the selected object in TIFF format.

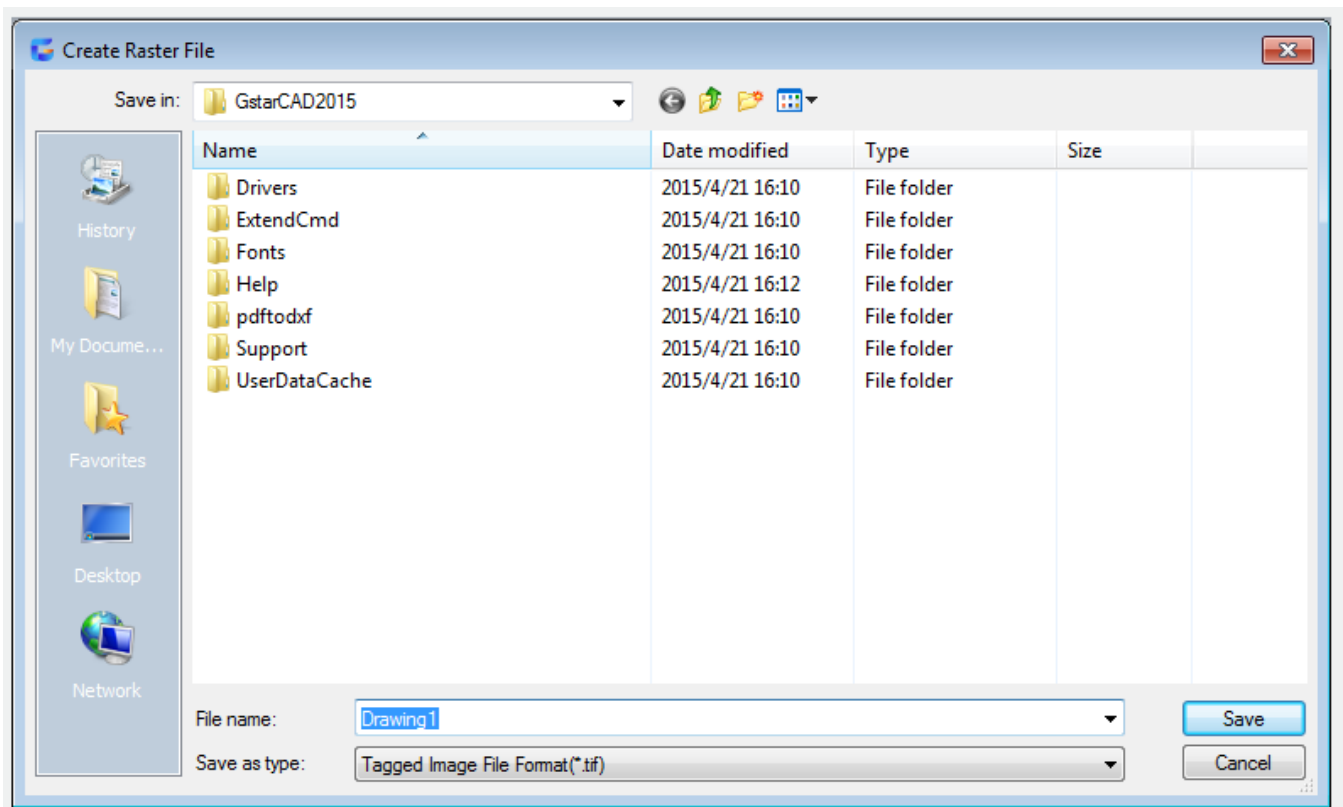

Command Access:

Command : TIFOUT

Function Description:

In the "Create Raster File" dialog box, users could input a file name to create a TIF format file. This file contains all selected objects and reflects the content that displayed on the screen.

Note : specify the FILEDIA system variable to 0, it will display command prompts.
