

Save and Restore Views

2465 GstarCAD MY /KW August 30, 2021 [Getting started](#), [Workflow](#) 0 1505

If you have saved specific views by name, you can restore them for layout and plotting or when you need to refer to specific details.

Save a view

The following settings are saved when you name and save a view :

- View scale, view position and view direction
- User coordinate system
- The location of the view (the Model tab or a specific layout tab)

Restoring a view

A named view can be used for the following operations:

- Restore the view that use frequently
- To specify the plotted area
- To control which model space view is displayed when the drawing is opened.
