

# Control Linetype Scale

2484 GstarCAD MY /KW April 14, 2022 [Workflow](#) 0 2082

The same [LINETYPE](#) can be changed to different scales by changing the linetype scale factor globally or individually for each object.

By default, global scale factor and current object scales are set to 1.0. You will see the Global Scale Factor and the Current Object Scale in the Linetype Manager.

- The linetype scale is changed globally for both new and existing objects by the Global Scale Factor value which can be set by the [LTSCALE](#) system variable.
- The linetype scale for new objects is controlled by the Current Object Scale value which can be set by the [CELTSCALE](#) system variable .

The [CELTSCALE](#) value is multiplied by the [LTSCALE](#) value to control the displayed linetype scale of object. You can change the linetype scale factor of objects by the Properties palette.
