

# User Coordinate Systems

2493 GstarCAD MY /KW November 9, 2021 [Workflow](#) 0 804

## Define user coordinate systems

You can apply a user coordinate system ( **UCS** ) with its own 0,0,0 origin and orientation in three-dimensional spaces. To simplify construction of three-dimensional entities, you can create as many user coordinate systems as you want, and then save and recall them as you need them.

## Use a preset user coordinate system

You can select a preset UCS in GstarCAD. When you switch the view to top, left, front, bottom, right, or back, the UCS will align to current view automatically.
