Modify Multiline

2552 GstarCAD MY /KW November 9, 2021 Workflow 0 964

Multiline is a kind of special object. You can modify it by <u>MLEDIT</u>, but can not modify it by fillet, chamfer and some other function.

Edit Multiline Styles

To change the properties , end caps and the background fill of subsequently created multiline, you can edit multiline styles using the command $\underline{\mathsf{MLSTYLE}}$
