

## Create Wipeout to Cover Objects

2556 GstarCAD MY /KW November 9, 2021 [Workflow](#) 0 991

A wipeout object is a polygonal area that mask underlying objects with the current background color. You can use [WIPEOUT](#) to mask details or make space for notes .

The wipeout object can be created by specifying a polygonal area with a series of points, or selecting a closed polyline.
