

Clip Raster Images

2578 GstarCAD MY /KW November 9, 2021 [Workflow](#) 0 709

With the help of a polygonal clipping boundary, you can clip the display of a raster image in a drawing.

Clipping an image, makes only parts of the image visible and you can increase redrawing speed using it. The clipping boundary can be a rectangle or a two-dimensional (2D) polygon with vertices within the boundaries of the image.
