Drawing Compare

2713 GstarCAD MY /KW December 3, 2021 Workflow 0 1402

Drawing compare is an exclusive function in GstarCAD which is added according to the user's requirement.

It enhances collaboration by using color-coded displays to show items on a drawing that have been changed, added, or deleted by other members of the design team. Changes to items such as styles, block attribute, object of block can also be tracked. Sometimes users need to judge what modification has been made between two drawings which were drawn at a different time. The usual solution is to mark the modification contents with annotations. This way is difficult to mark and check.

The function makes it convenient for users to locate the changed parts. The program will analyze the differences between two drawings automatically. Then the differences will be marked with different colors. Users can also set the marking color by clicking the "option" button.
